

**Annex 29****Registration****Scope of the review on  
“Tiantie Metallurgy Group CDQ Project” (3162)**

1. The Board agreed to undertake a review of a project activity “Tiantie Metallurgy Group CDQ Project” (3162).
2. The Board agreed that the scope of the review relating to issues associated with validation requirements shall cover a review to assess:
  - (a) The additionality of the project activity through an assessment of suitability of input values to the investment analysis, including the tariff (0.42 RMB/kWh), grid connection charges, and components of the annual O&M cost (electricity, steam and de-mineralized water cost); and
  - (b) The suitability of the selected baseline through an assessment of:
    - (i) How the DOE has validated that only the share of electricity taken from the public grid will be replaced in the TISF mini grid;
    - (ii) How alternative W2/P6 has been deemed to be the applicable baseline if, according to the PP/DOE response, in the pre-project scenario the electricity has been taken from the TISF mini grid, which consists not only of public grid sources but also of captive sources;
    - (iii) What is the share of generated electricity that the PP (JTC) exports to the TISF mini grid; and
    - (iv) The conservativeness of using the public grid emission factor when it is not clear that only public grid electricity will be displaced by the project activity.
